Vsebina raziskave

Ključne besede ADP:

seksualno delo, poklicna tveganja, stigma, varnost, tveganje, profesionalizacija, delo, zaposlitev

Ključne besede ELSST:

KARIERA, SPOLNA INDUSTRIJA, POKLICNA IZPOSTAVLJENOST

Vsebinska področja CESSDA:

Delo in zaposlovanje

Vsebinsko področja CERIF:

Sociologija

Vsebinska področja ADP:

NASILJE

ZASEBNO ŽIVLJENJE

POSEL

ZDRAVJE

DOSTOP DO STORITEV

Povzetek:

Stigma je najpomembnejša strukturna determinanta zdravja in varnosti pri delu v seksualnem delu. Čeprav se je koncept stigme v zadnjih desetletjih razvil, še vedno obstajajo vrzeli v razumevanju kompleksnosti tega pojava. Kot odgovor na te vrzeli je bil izveden sistematični pregled literature, pri čemer so raziskovalci upoštevali kvalitativne, kvantitativne in študije z mešanimi metodami, objavljene po vsem svetu med letoma 2010 in 2020. Iskali so povezave med različnimi vrstami stigme in poklicnimi tveganji, pri čemer so upoštevali vpliv pravnega konteksta. Preučili so pričakovano, izkušeno, ponotranjeno, večplastno, zaznano in sekundarno stigmo ter raziskali, kako stigme vplivajo na dostop seksualnih delavk_cev do storitev, na njihova zasebna življenja, zdravje, varnost in kariero. Raziskovali so tudi vpliv stigme na poklicna tveganja v različnih pravnih modelih regulacije seksualnega dela.

Abstract:

ni podatka

Metodologija**Časovno pokritje:**

2010 - 2020

Čas zbiranja podatkov:

2021 - 2022

Čas izdelave:

2022

Država:

Avstralija, Bangladeš, Bolivija, Brazilija, Kanada, Kitajska, Kostarika, Danska, Dominikanska republika, Gvatemala, Indija, Izrael, Kenija, Laos, Libanon, Mongolija, Nepal, Nizozemska, Nova Zelandija, Portoriko, Južna Afrika, Šri Lanka, Tanzanija, Tajska, Uganda, Združeno kraljestvo, Združene države Amerike, Vietnam, Zimbabve

Geografsko pokritje:

Vse našete države.

Najmanjša geografska enota:

Država

Enota za analizo:

Medijska enota: besedilo

Populacija:

Vključeni so znanstveni članki iz celega sveta, ki so izpolnjevali naslednje kriterije: obravnavajo povezave med stigmo in poklicnimi tveganji v seksualnem delu; objavljeni so bili v znanstvenih revijah med leti 2010 in 2020 v angleškem jeziku; imajo dostopen povzetek.

Vrsta podatkov:

Besedilni

Izključeni:

Izključene so bile študije, ki niso imele empirične podlage in niso vključevale seksualnih delavk_cev v svoj vzorec; študije, ki so vključevale mladoletne osebe; mednarodno primerjalne študije; študije, ki niso pristopale k seksualnemu delu iz poklicne perspektive; in študije, ki niso eksplicitno obravnavale vpliva stigme na poklicna tveganja ali niso opredelile stigme kot neodvisne ali posredniške spremenljivke v povezavi s poklicnimi tveganji.

Zbiranje podatkov je opravil:

MI - Mirovni inštitut

Časovna opredelitev podatkov:

Presečno

Pogostost zbiranja podatkov:

Enkratno zbiranje podatkov

Tip vzorca:

Zajeta celotna populacija

V prvi fazi je bil izveden pregled znanstvenih člankov, objavljenih v obdobju od 2010 do 2020, z iskanjem v iskalniku mEga, ki ga upravlja Nacionalna in univerzitetna knjižnica Slovenije. Pri iskanju so bile uporabljene naslednje ključne besede v angleškem jeziku: "seksualno delo" in "poklic" in "tveganje" in "stigma". Dodatni članki so bili identificirani z ročnim pregledom bibliografij ustreznih študij in osebnih baz raziskovalcev. V nadaljevanju so bile študije izbrane na podlagi kriterijev za vključitev (kriteriji so navedeni v delu "populacija"). Dva glavna raziskovalca sta neodvisno pregledala članke glede na kriterije za ustreznost v dveh korakih. Najprej sta pregledala naslove in povzetke. Če izbire ni bilo mogoče narediti na podlagi te informacije, je bil izveden tudi pregled celotnega besedila. V primeru nesoglasja glede ustreznosti določenih člankov sta raziskovalca izvedla razpravo s celotno raziskovalno skupino. Kriteriji za zagotavljanje kakovosti vključenih študij: (1) objava v recenzirani akademski reviji; (2) opis metodologije ustreza akademskim standardom (opis raziskovalnega problema, raziskovalna vprašanja ali hipoteze, metode, odgovori na raziskovalna vprašanja); (3) jasen opis demografskih značilnosti vzorca, kot so starost, zakonski stan, izobrazba in kraj zaposlitve. Študije z oceno kakovosti med 2 in 3 so bile ocenjene kot visoko kakovostne in vključene v pregled. Študije, ki niso dosegle ocene 3, a so bile vseeno vključene, so imele predvsem pomanjkljivosti pri opisu vzorca.

Način zbiranja podatkov:

Kodiranje vsebine

Uporabljeni inštrument:

Smernice za zbiranje podatkov

Opis zbiranja podatkov:

Raziskovalci so kodirali vsebino glede na predpripravljen vodič za kodiranje. Za izpis podatkov je bila predpripravljena tabela v Excelu. Izpis podatkov je bil izveden neodvisno s strani treh raziskovalcev. Vsi so bili vključeni v razvoj metodologije in so opravili testiranje kodiranja podatkov. Bazo podatkov in kodiranje sta kasneje pregledala dva glavna raziskovalca.

Ukrep za zmanjševanje manjkajočih podatkov:

Dodatni pregled baze podatkov.

Uteževanje:

Brez uteževanja.

Očiščenje podatkov:

Podatki so očiščeni.

Stopnja sodelovanja:

Zaradi načina izvedbe raziskave, stopnje odgovora ni mogoče izračunati.

Uvrstitev raziskave po pomembnosti:

7 - teoretsko ali praktično pomembne raziskave, omejene na manj splošno populacijo, manj vplivne

Dostop do podatkov

Mesto:

Arhiv družboslovnih podatkov

Velikost zbirke:

1 Podatkovna datoteka.

ID: **Stig_2** Oznaka: **Stigma measurement**

Dobesedno vprašanje: Analysis techniques used in the study to measure the impact of stigma.

Vrednosti	Kategorije	Frekvenca
FSW-related internalized stigma scale, 7 items on a 5-point Likert scale		1
FSW-related internalized stigma, 8 items on a 5-point Likert scale and one factor with Cronbach's alpha = 0.88. In addition binary questions were applied to assess experienced stigma		2
Perceived occupational stigma scale, 6 items on a 4-point scale		1
Scale with binary responses, namely sex work-related stigma scale binary responses (up to 25 points). In addition binary questions were applied to assess experienced and anticipated stigma		1
Scale with binary responses, two items were applied (with calculated Cronbach's alpha = 0.86)		1
Single or several binary questions measuring stigma		2
Stigma Awareness scale, 5 items on a 4-point Likert scale (Cronbach's alpha = 0.80; Stereotype Threat, 6 items (Cronbach's alpha = 0.79).		1
Stigma scale with no details given about the scale, but it is mentioned that "stigma metrics were evaluated using a previously validated index covering various stigma factors".		1
Stigma scale, 15 items on a 4-point scale (referring to amount of people), and two factors (following EFA and PCA): "devalue" (6 items, Cronbach's alpha = 0.61), "discredit" (9 items, Cronbach's alpha = 0.80)		1
Stigma scale, 6 items, 4-point Likert scale, Cronbach's $\hat{\alpha} = 0.73$		1
Stigma scale, anticipated stigma: 2 items, and experienced stigma: 7 items, both scales with binary responses (FSW: Cronbach's alpha = 0.865, MSW: Cronbach's alpha = 0.822)		1
Stigma scale, experienced stigma: 9 items, perceived stigma: 5 items, and anticipated stigma: 4 items, all scales with binary responses		1
