## TECHNICAL SPECIFICATIONS - INTRODUCTION

Between 31st October and 25th November 1997, the institutes listed above conducted the eight wave of the Central and Eastern EUROBAROMETER (CEEB) on behalf of the **European Commission**, Directorate General X for Information, Communication, Culture, Audiovisual, Survey Research (EUROBAROMETER) Unit, in co-operation with the External Information Unit of the same Directorate-General. All requests for further information should be addressed to :

Mr. Jacques VANTOMME  
External Information Unit  
(T120 - 08/10)  
European Commission  
B - 1049 Brussels  
Tel 32-2-295.49.33  
Fax 32-2-299.92.88

Compared to CEEB7 (Autumn 1996) this time only the 10 candidate countries were included in the survey.

All EUROBAROMETER data are stored at the Zentral Archiv (Universität Köln, Bachemer Strasse 40, D - 5000 Köln 41). They are at the disposal of all institutes which are members of the European Consortium for Political Research, of the Inter-University Consortium for Political and Social Research (Michigan) and all those interested in social science research.

## DETAILS ON SAMPLING

A total of 10 countries in Central and Eastern Europe were surveyed : Bulgaria, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, Slovakia and Slovenia. In total 10.391 citizens aged 15 years and over were interviewed face-to-face in their private residences in the region as a whole. The survey was fully nationally-representative.

As with Central and Eastern EUROBAROMETER No. 2,3,4,5,6 and 7, each institute adopted a multi-stage random probability sample design. There were slight variations in each country's sample design to take account of its individual characteristics and population structure. In each of the 10 countries surveyed, interviews were conducted throughout every region within its national boundaries.

## SAMPLING POINTS

Bulgaria	175
Czech Republic	118
Estonia	164
Hungary	117
Latvia	137
Lithuania	115
Poland	200
Romania	102
Slovakia	149
Slovenia	104
TOTAL	1.381

The sampling points for each country were selected, in the first instance, via a division into its major socio-economic areas. A list of these is appended. Within each of these areas smaller electoral or administrative districts were randomly selected and, taking into account such factors as the relative size of the population living in rural and urban settlements, the number and distribution of sampling points in each of these districts was finalised.

In general ten interviews were conducted around each sampling point, with individuals being selected via one of four main methods, these being :

- (I) Double clustered random address sample + next birthday in the household
- (II) Contact randomly selected from a list of the electorate. In most cases such lists were no more than three years old.
- (III) Random selection of addresses from published, or specially commissioned lists, with individuals being selected via a Kish matrix or other random method.
- (IV) Random route from a selected starting point (often the central bus station in larger settlements) with individuals again being selected via a Kish matrix or other random method.

Quite understandably, in many instances address or electoral data was not available for the population below the age of enfranchisement and therefore quotas were imposed to ensure that the correct number of 15-17 year olds were interviewed.

The maximum number of interviews in any individual household was one. All interviews were conducted face-to-face by fully-trained interviewers in people's homes.

In Slovakia, CEEB8 was carried out with a quota sample as was the case in the previous years. The defined quota were: size of community, sex, age, education. 1162 interviews were completed in 79 districts according to the percentage of the population of these districts with regard to the total Slovak population. Since January, Slovakia has been divided in 8 new regions (before there were only 4) and 79 districts (only 38 before). Then sampling points were selected according to the distribution male/female, the size of community, grouped into 5 categories, for education in 3 categories and for age in 4 categories in each district.

In each country the final sample was representative of the adult population aged 15+ years.

## **REALISATION OF FIELDWORK**

	<b>Fieldwork</b>	<b>Number of respondents</b>
Bulgaria	10 November-17 November	1014
Czech R.	31 October - 10 November	967
Estonia	05 November-13 November	1007

Latvia	12 November-24 November	1025
Lithuania	12 November-24 November	1013
Poland	08 November-12 November	997
Romania	11 November-25 November	1044
Slovakia	04 November-17 November	1160
Slovenia	12 November-18 November	1042
<b>TOTAL</b>	<b>31 October - 25 November</b>	<b>10.349</b>

## WEIGHTING OF DATA

Like for CEEB7, where possible, we used an interlocking matrix age/education. This was the case for Bulgaria, Czech Republic, Slovakia, Hungary, Lithuania and Romania.

Slovenia was also weighted in that manner, but as the distribution of age did not fully correspond to the requirements, age was used on top of the matrix to guarantee the distribution.

For the countries Estonia, Latvia and Poland, no statistical data were available for this matrix. In these cases, the weighting according to age and education was carried out separately.

As last year, the matrix age/education was given in advance so that the institutes could take this more into account.

The overall results for Central and Eastern Eurobarometer as a whole were weighted according to each country's 15+ population.

The data for each country's population by sex, age, education and region was prepared by the participating institutes :

	<b>POPULATION TOTAL (15+yrs)</b>	<b>PROPORTION OF POPULATION (in %)</b>
Bulgaria	6.903.409	08.42
Czech Republic	8.150.976	09.94
Estonia	1.188.775	01.45
Hungary	8.244.274	10.06
Latvia	1.992.635	02.43
Lithuania	2.842.640	03.47
Poland	29.393.000	35.86
Romania	17.628.133	21.51
Slovakia	4.059.737	04.95
Slovenia	1.561.628	01.91
<b>TOTAL</b>	<b>81.965.207</b>	<b>100 %</b>

## **BACKTRANSLATION**

As all questionnaires were backtranslated completely three years ago (CEEB5), backtranslation was limited this year (CEEB8) to the new questions that were added. Any differences were discussed with the appropriate institutes and an acceptable solution was found in all cases.

## **QUALITY CONTROL**

For CEEB8, a specific quality control was carried out by Oxford Research International in Romania and Slovakia. The aim of the procedure is to help all organisations involved better understand fieldwork activity on this study. Furthermore, it serves as an opportunity to test the methodological merit of the institutes involved in the project and allows a cursory appreciation for the accuracy and reliability of data generated.

All work took place during November and was carried out by two or three person teams. The teams generally took one week to monitor fieldwork activities in the respective countries.

The method employed was to begin by interviewing fieldwork supervisors and interviewers in the field before working back to the institute for a final appraisal of the institute's work. Interviews of supervisors and interviewers commonly lasted between 40 minutes to one hour and enquired into the following areas:

- general information including interviewee's name and address, place of interview, length of interviews, selection and training of interviewers (asked to supervisors), number of sampling points or the number of interviews conducted on CEEB8, etc.
- Training and instruction given specifically for CEEB8
- Routine for selection of households and respondents
- Communication
- Knowledge about their respective institute
- Quality control exercised by the institute on their work.

Institutes were asked more details about the overall project management on CEEB8 and about the operations of the institute in general.

## **GfK EUROPE AD HOC RESEARCH**

GfK EUROPE Ad hoc Research, located in Brussels, is GfK's co-ordination centre for all international ad hoc research with a turnover of over 100 million ECU in 1994. It is present in most countries of the European Union, in all former EFTA-countries, and in major Central European and CIS countries, adding up to 24 countries in total. Outside Europe, GfK is represented in the USA, Canada, Japan, Hong Kong and Australia. The total turnover of GfK is about 250 million ECU ranking it number 4 in the world. Almost all the institutes are owned by the German mother company, GfK AG, founded in 1929.

GfK, through Dr. Rudolf Bretschneider, Managing Director of Fessel und GfK Austria (1959), was one of the first western research companies to found institutes in Hungary (1989), Poland (1990), Czech Republic (1991), Slovakia (1993), Bulgaria (1994) and Romania (1995). Agreements have been reached with companies in Croatia (1996), FYROM (1996), Slovenia (1996), Albania (1996) and also in the Baltic States and the Ukraine (1997). Furthermore partnerships have been established with most countries of Central Asia and the Caucasus. All together more than 300 researchers are employed and trained by GfK in Central and Eastern Europe.

GfK has carried out several studies for the EU amongst which are the Standard EUROBAROMETER (in Denmark since 1989), the Consumer Confidence Barometer (in Germany since 1980, in Austria, Belgium, the Netherlands, United Kingdom since 1995) and several other ad hoc studies.
